Test-Taker Agency: _____

Testing Location: _____

Notes: _____

Test-Taker Score 

E\$P/JTK 6/3/04

<i>Score Awarded</i>	<i>Maximum Points</i>
	40

Test Methodology, Equipment, and Materials

The three main parts of this test are wall preparation, insulation blowing, and wall repair.

- ✓ Prepare wall for insulation, including removing siding, building barriers indoors, etc.
- ✓ Blow insulation using the dense-pack method.
- ✓ Prove to evaluator that you have achieved adequate density.
- ✓ Repair the wall back to “as found” condition.

Job-testing all test takers should be a higher priority than finishing the wall-insulation job efficiently.

Equipment

- | | |
|------------------------|------------------|
| Insulation blower | Screw gun/bits |
| Blowing hose | Hammer/flat bar |
| Fill tube and fittings | Fiberglass batts |
| Gloves & respirator | |
